

Approaching Culture with a Biblical Worldview

Biblical Worldview Beyond the Basics takes students beyond simply understanding a biblical worldview and foundational Christian doctrines, showing them how to use that worldview to interact with and understand today's culture. By learning the Creation-Fall-Redemption paradigm and applying it to modern issues such as gender controversies, technology use, and government concerns, students learn not just how to *understand* but also how to *do*—applying their faith to make a difference in today's culture.

How We Teach It

Think Biblically

Every chapter includes direct instruction and discussion activities, often using Socratic questioning, to encourage students to think through life experiences from a biblical worldview.

Apply Knowledge

Designed for upper-level high school students, *Biblical Worldview Beyond the Basics* uses case studies, primary source analysis, apologetics activities, and mini-projects to apply biblical knowledge to challenging questions.

Define Objectives

New for the 2nd edition, each paragraph clearly relates to a defined objective connected to clear, digitally gradable assessment questions.

Connect to Technology

Robust use of technology includes online videos, digital assessments, and a digital portfolio-building project. Webquests keep students engaged as they explore material more deeply, while PowerPoint presentations and test banks benefit teachers.

Materials

Student Edition

With carefully designed objectives and chapter assessments, the student edition guides students through a deep look at biblical worldview and how it affects their interactions with the modern world. The 2nd edition of *Biblical Worldview Beyond the Basics* is completely rewritten to follow this objective structure and with a Trove site license for teachers, technology can be found throughout for students, which has online videos for nearly every lesson and webquests that send students digging deeper into worldview issues.

Teacher Edition

The teacher edition uses multiple teaching strategies to engage all learners. These strategies include quick write, Think-Pair-Share, data analysis, online video analysis, brainstorming, collaborative writing activities, and traditional lecture-and-response instruction. Throughout the teacher edition, strategies and projects are flagged for students to use in their end-of-the-year portfolio, and each has its own rubric. New for this edition, the teacher edition includes the teaching cycle, with activities that include engagement, instruction, application, and assessment.

Assessments

The assessments packet includes 25 chapter tests and quizzes for every section. Non-test assessment options such as essay prompts, student-created videos, presentations, and reviews at the chapter and section levels are also included. An answer key is available.
